***Re: Wireless E9-1-1 Phase II Automatic Location Identification
Requirements, CC Docket No. 94-102***

Ex Parte Meeting Regarding Comments of U. S. Wireless Corporation on
Performance, Viability, and Application of the Mobile-Assisted Network
Location System

Dear Ms. Salas:

On Tuesday, July 24, 2001, Mark Kahn, Jan Klein and Randy Miller on behalf of U.S. Wireless Corporation held a conference call with Kris Monteith and others in the Wireless Telecommunications Bureau and the Office of Engineering and Technology to discuss issues related to the above referenced document regarding Phase II deployment.

U.S. Wireless' comments were intended to clarify issues related to MNLS performance and the role MNLS technology can play in meeting the E-911 Phase II mandate. U.S. Wireless believes that with continued development and the combined use of complementary location technologies, such as the RadioCamera™ System, the performance of MNLS can be improved over time, allowing it to play a role in a larger hybrid solution that can meet the overall performance objectives of the mandate.

Very truly yours,

Patricia A. Murphy
Vice President & General Counsel
U.S. Wireless Corporation
